DRUPA 2012

Taking place only every four years and being one of the most important international exhibition events, it is the perfect occasion to present our paper cutting machines to a very wide, expert and thoroughly international public. After all, innovations are in demand. We could successfully respond to this by introducing the new 48 cm cutter model EBA 486 ET, which is equipped with touch pad and photo cell safety guard as standard. Our graphics machine range is further enlarged by the new manual paper cutter EBA 432 M, with a cutting length of 43 cm.

EBA 2339 WITH ECC

The office shredder EBA 2339 has been upgraded, and as of 1st July comes with the well-known ECC-Control. The upgrade means that, any model from the EBA 2326 up to the EBA 5141 is equipped with our innovative electronic capacity control.

ZERO ENERGY

Zero power consumption is the essential factor. As of 1st July any EBA shredder with EASY_SWITCH, and thus any model from the EBA 1324 up to the EBA 5141, will come with the Zero-Energy-Shut-Off. This means that after 30 minutes of non-operation, the shredder is automatically shut down without consuming further power. Yet another selling point for our sustainable and ecologically beneficial products.

SUMMER BREAK 2012

Our production lines will be closed for the summer break from 30th July through to 17th August. Also during this period, no shipments of machines can be made. Thank you for your kind attention.
